

Submerged Strength. Unmatched Efficiency.

OPENWELL PUMPS

EUFM OPENWELL PUMPS

technical data

Feature	Performance Range
Power	3.0 HP to 30.0 HP
Voltage	380V-415V (Three Phase)
Maximum Head	128 Meters
Maximum Discharge	5100 LPM
Speed	2900 RPM

key advantages

Zero Suction & Priming Hassles:

Since the pump operates fully submerged, you never have to worry about priming or suction lift issues. Water flow is instantaneous upon startup.

Built for Power Fluctuations:

Engineered to operate reliably even with wide voltage swings (380V-415V), protecting your investment against inconsistent rural power grids.

Whisper-Quiet Performance:

The submerged design ensures noiseless operation, significantly reducing noise pollution on the farm compared to surface-mounted pumps.

Enhanced Cooling & Longevity:

The motor is specifically designed with a higher cooling effect, ensuring that the internal components stay at optimal temperatures even during continuous high-speed (2900 RPM) operation.
